

Storm Lynx

- ENVIRONMENTALLY FRIENDLY
- EASY INSTALLATION
- EXCELLENT RESULTS
- PASSIVE WATER CLARIFICATION
- IMPROVED CLARITY
- CONFORMS TO ANY CURB HEIGHT/SHAPE
- HIGHLY VISIBLE

These mats are meant to replace the sand sock systems which are quite dangerous and inflexible towards different curbs. These mats are malleable and can conform to any curbside drain. They are also soft so that if a vehicle runs over them they do not cause damage such as the sand socks or other competitive systems do. Easy to install and remove and also act to clean water, hold back sediment etc.

Storm Lynx is a low profile, high visibility water clarification solution to assist in the collection of sediment and debris - prior to its entry into storm water management systems.

It's low profile ensures it will not become a safety hazard, while it's highly reflective covering allows it to be seen, even during inclement weather conditions. Further it's exceptional drainage characteristics will not cause water to back up around the drain, which can cause additional damage to curb side areas and neighboring infrastructure (lawns etc). Storm Lynx is charged with Clearflow's Soil Lynx product to enhance water clarification and sediment collection.

Storm Lynx is constructed of high flow materials that allows peak flows of water to enter the storm drain, while the treated natural screening material acts as an exceptional filtration device, capturing sediments and debris that is moving in the water column including most of the finer sediments suspended in the water.

Storm Lynx is also constructed with a small berm, which traps the heavier and larger sediments stopping them from entering the main water drainage location, while allowing the water to flow thru the berm.

Comes in standard sizes, but can be made to order and fitted for any situation.
